

Tucker Adams - 00:26

What's good?

Michael Byers-Norton - 00:28

Seeing all that gonna make me a sandwich in the background. So I apologize for being away from desk for a minute.

Tucker Adams - 00:35

No worries, I'll have a camera off.

Michael Byers-Norton - 00:38

All good. I threw a screen share up. Honestly, I've been grinding since we talked and I don't remember what I was supposed to prepare for this call. So I just kind of threw my ideas down and went through the list of items you had in teams but I think there was something else I was supposed to do.

Tucker Adams - 00:52

No, I mean that was. I think that was it.

Michael Byers-Norton - 00:55

Okay, good, cool. But yeah, no, I just wanna dive in and chop wood with you on this man. So. Okay, I went through the list there. I think you're dead on a lot of these items and I put my notes on the screen I'm sharing. Hopefully that's semi legible from a font size perspective and just threw down my immediate thoughts just from hey things I want touch on and I put those down before I read your list. So glad to see that most of those are at least the what the fuck are we doing? Structure wise are repetitive but the like the big concern I think is just gonna be around focus and effort.

Michael Byers-Norton - 01:38

But I think that's always been the case and I don't know how to balance like properly taking care of you all the impact you're making on terabyte and then all you know, projects like this. And so I want to you're not be just focused on new edge code from a. Talking about what's appropriate from a structure perspective. But at the same piece we need to get new edge code structured and going to some degree like legally regardless we know where we're negotiating from there outside and then same piece. Just make sure you're focused on everything and anything you're focused on.

Tucker Adams - 02:14

Right.

Michael Byers-Norton - 02:15

So it's just. Yeah. Making sure Tucker's good is kind of the undertone of that as well. So does that make any sense or is that just kind of.

Tucker Adams - 02:23

It does. It does. I guess that all of this is kind of predicated on have it. I. I keep coming back at least to the potential to have funding because I feel like when we talk through this in the past we kind of get to some version of. We would need something that looks like site control which requires money, which requires investors. Right. Unless we're gonna like go find \$5 million ourselves. So I'm interested to hear what you're hearing on the investment side and obviously. Well I think probably some of that is embedded in the questions about like structure etc and so yeah, maybe I'll let you keep driving. What you're saying makes sense.

Tucker Adams - 03:12

I mean I have the hours in my day that I can put towards this and I can also, I mean that can just be, you know, obviously sweat equity for the time being.

Michael Byers-Norton - 03:26

That's the other piece on it. Like if we figure out how terabytes related to it, we could still be burdening hours, you know, for cop.

Tucker Adams - 03:34

Yeah.

Michael Byers-Norton - 03:35

Against something. Right. Like so we have cards to play as I'm trying to highlight there. But it's like we need to start doing something right. We need to.

Tucker Adams - 03:43

Yep.

Michael Byers-Norton - 03:43

Need to start moving the right direction because I think if we had like I don't want to be too vulnerable here. I don't want to give up too much position because I, I know a lot of people that I'm working with are very experienced sharks in this area which is a great thing because they're on our team and pointing the guns in the same direction right now. But I don't know how that's going to change as we start to get into biz type of moment. The read on triple point is they're just realists in this space. That's kind of why I'm excited to be working with them. So it's doesn't make dollars or make sense type of moment. What are we really asking for? Is their comp appropriate for it?

Michael Byers-Norton - 04:20

But I also know they're very savvy and going after people who are distressed looking for investments to unfuck a project or get something on the line. So it's an interesting danger zone there that feels incredibly promising. But then there's also the approaches like with the sites that one has. If we joint ventured with them and took those over and tried to use their investment a small amount to cover the cost that we need because it's underneath that spv like there's that game I think is what's really ahead of us like right now of what are we asking for? What's the business case? And then who do we just go after to see if the business case fits. What they're trying to do.

Tucker Adams - 05:05

With you.

Michael Byers-Norton - 05:07

Is that 2 profit for you.

Tucker Adams - 05:11

Step three, I mean again makes sense so far.

Michael Byers-Norton - 05:22

Also going through like some of the items. I'm just dropping an idea in your head you're starting here up to. But like when you said hey, when you get an initial site here to make an example of it, you know, or something to like move quickly on or you know some sort of language you use there in the bottom half of your Bullets like I think that's definable right now. I think that's something that we can build a thesis around that pitch as well, which is identifying small number of these sites that are within a strategic distance of each other or strategic distance of other data centers that could be used and connected to very effectively.

Michael Byers-Norton - 05:54

And so we can put together little business cases like that to see if it's working investors on a smaller level or are we trying to go big on these. Like trying to figure out the scale that we want to play at. I think is crucial for we are right now. But being just two people, even if we did get investment, you know, what are we trying to do? Are we trying to stamp a team? We trying to hire a bunch of subs? Like that workload item starts to kick in as well at a certain point here. Like we have just put together a bit more of a plan that way.

Tucker Adams - 06:27

That is fair, I think. Well, this is maybe like a chicken and egg type problem. It seems like to me to some degree the team that we need, the work that needs to get done, et cetera, depends on this. The portfolio that we are going after and who we anticipate selling it to. And what I mean by that is like when were talking about the Path one small scale profile or portfolio on Tuesday, Were talking about it in the context of like potentially working with Triple Point on that or not. If we work with Triple Point, it's like a. Well, I guess the sell straight through is more about the 200 site Portfol. But even when were Talking about the 12 site portfolio, it was, you know, getting it to power but not doing vertical development. Potentially.

Tucker Adams - 07:23

The point of all of this is it seems like the level of work that we want to do on individual sites depends in part on where they're coming from and where. Who we anticipate transacting them to.

Michael Byers-Norton - 07:38

Yes. Okay, I like that. I think quite a bit. Because if we're doing with Path one, they have a desire to be putting money together vertically. Like that's their whole game plan and spiel. Okay. And so that's an opportunity for us to stay in our swim lane. Just get paid on the power lamp part of it.

Tucker Adams - 07:53

Yeah.

Michael Byers-Norton - 07:54

Or to actually have that joint venture be on a project level. So we're getting potentially a small piece of the data center as well. Yep. And so that's interesting. Triple Point is just trying to make returns in the next three years. Right. That's their whole goal as a family office investor related organization. Like very Makes dollars. Makes sense. Not doing big long high risk projects.

Tucker Adams - 08:17

Yeah.

Michael Byers-Norton - 08:18

Want to go quickly. Well but they also have end users in tow too. Like they have a few modular people set up to drop in.

Tucker Adams - 08:24

That's the Sky Vault and Softbank connection, right?

Michael Byers-Norton - 08:30

Yes. So basically if we look at what those are essentially operators who use modular deployments. And I think if we just start using that higher level strategic term for it like it shows that for a new edge co we're just enabling them to take over a site. We're just getting sites to pre lease. Right. And if we're joint venturing with them as one rep and I think triple point enables us to joint venture with them as you're putting money in the game as the land developer. So it's a different taste there. But if we're just flipping sites like yeah, that's one route, I guess that's it. So if we know that there's modular operators out there floating around, there's modular products out there floating around that an operator could buy and add to the portfolio.

Michael Byers-Norton - 09:16

So that's like avenue number two where that XCT type of group pops up or Giga pops up, mod 42 pops up. Like these groups, we're trying to build modular and sell them to people but we need an entity that's willing to put down that, you know, 10 million a megawatt to own those things. And that's not the raise you and I are going for. Like we're not trying to a capex raise. I don't think at this point.

Tucker Adams - 09:38

I mean if you have a rosier view of what investors are willing to do, maybe the answer is different from where I'm sitting. I feel like you would want to be able to prove out the our ability to get sites to whatever stage we are trying to get them to. Whether that's powered land, whether that's vertical, whatever. Probably not vertical development. Like we need to run through it once or ideally more than once before you start talking about getting bigger checks to do either the same amount of work on more sites or more work on the sites we're already working on.

Michael Byers-Norton - 10:19

I agree completely. So that's why I don't think that's a real distraction. Like we're just putting together solutions to make sites releasable. How we play that card is really set by site based.

Tucker Adams - 10:31

Yeah. And I think there's going to be different amounts of work, different types of work needed for each site. I'm sure the patterns will start to emerge. But you will assess the work that Needs to get done on a side by side basis.

Michael Byers-Norton - 10:47

Exactly. And that's the specular budget we're trying to raise, right? Yeah, like, because if we're doing a portfolio flip, I don't think that's what new edge code naturally does. It's an opportunistic thing we can do potentially with Triple Point. But realistically that's probably just a roll through triple point. And if you were involved in helping get it done, I'd kick you something properly through it. Right. That'll be like an example of a solution piece that we work together. But it's not underneath an spv, but we carve out a dozen sites there. That's our spv. That's a different. Because now we are edge developers at that point.

Tucker Adams - 11:23

Yeah.

Michael Byers-Norton - 11:23

Trying to get those positions to be used as a developer would.

Tucker Adams - 11:28

Plenty of work to keep two people busy there on the portfolio sell through. Basically with Triple Point. I'm trying to remember our conversation from Tuesday. The idea would be that some amount of diligence and or sales engineering would still be required from you. Slash from us in order to facilitate that transaction. Or is Triple Point like, yo, thanks for the introduction. We'll take it from here. No additional work needed.

Michael Byers-Norton - 12:03

They have rose colored glasses thinking it's no additional work needed. Okay, but those are rose colored glasses, dude. Like those are straight up dreams. Right. So that's why I don't think it's realistic. There will be some diligence required and in my mind I know what that is. I know how to pitch those sites effectively. But it does require us to have hours we can throw at it to build a terabyte solution to run through our program. Because if you come out with test fits, the market overview like a desktop diligence document and a investment thesis.

Tucker Adams - 12:39

Looking.

Michael Byers-Norton - 12:40

Pretty good all suddenly, right? Yeah.

Tucker Adams - 12:42

Well yeah, if with the cynical counterpoint being the Triple Point guys just say, yeah, we will do all of that ourselves. We're so confident in our ability to navigate the space that well, we'll take it from here. We've done investments before, Right. Like that's the version that has no TBDI input at all. So shifting a little bit. I was looking at your first bullet asking about Triple Point. Just being an investor or kind of being the ones in charge. I thought when we talked to them, you know, several weeks ago when I was on the call, they were saying like, you know, we need to be running it. Investors are investing in us, not someone that we're like passing the money to. Is the read different now? Like, has something changed? Does the question make sense?

Michael Byers-Norton - 13:42

Yeah, no, that makes sense. And something I'm trying to figure out as well. Right. Because I saw their pitch deck yesterday for actually raising money from these family offices.

Tucker Adams - 13:51

Okay.

Michael Byers-Norton - 13:52

And it's very focused. Right. But it's very focused in power land. Like, that's what they're trying to fill a niche, but in reality is like, no, there's so many different ways they can put that money to work in a lot of the projects I'm seeing right now that the projects they're not going to control. They're just stepping in and put like 6 million into it early and down the road, then, like, turns out 15 of the equity on the project. Like, they're doing those type of plays. So. But those are like supporting projects already moving that are distressed, that need a little bit of help. So that's very.

Tucker Adams - 14:22

They're already putting money to work on these projects.

Michael Byers-Norton - 14:25

Yeah, I'm trying to. The fire drill I had this morning was them reviewing a site to buy in Texas. And it's somebody who's doing a shittier pitch than I've ever done for a site pushing it. And it's surprising because they have like, all the sites I'm reviewing for right now don't have. Aha. Control. And they just don't. Like, they don't know. Like, they haven't engaged EHJ yet. Their power is kind of developed and their test fits are very optimistic. Like, it's just. It's amazing seeing the number of people getting the space that don't have the background. I do. But it also highlights how I'm not getting the message across appropriately if these guys are successfully moving sites. And it's. So it's hard for me to protect the investor. It's a terrible point in this way because they're. They're moving on. It's.

Michael Byers-Norton - 15:09

So, for example, this is all just you and I talking, but there's a. A deal right now that a riot. Do you know Riot AI.

Tucker Adams - 15:19

I'm looking. Yeah.

Michael Byers-Norton - 15:21

It used to be a video game company. I think they hosted.

Tucker Adams - 15:23

Like, that's what I thought.

Michael Byers-Norton - 15:24

Yeah. They got into crypto pretty heavy. But they have a project that they're pretty excited about. See if I can find it here in Kentucky. And so I've been reviewing their pitch on it because I. It's already a very baked project. And that's kind of confusing to me of like, so what are we trying to do here, guys? What are we really trying to pull and there's a group that is trying to buy these Riot sites and turn them into bigger data centers. And that group is called Giga Energy. And GIGA is already involved in these sites, ironically, usually as the crypto modular seller.

Tucker Adams - 16:15

So I was going to say we talked about GIGA in the context of modular development.

Michael Byers-Norton - 16:21

So basically they start. Yeah, sorry. Picture that made me Stephanie.

Tucker Adams - 16:26

No, no, I thought you were. Go ahead.

Michael Byers-Norton - 16:29

So check this out. So this site right now is a riot site. These are Giga crypto trailers. And you'll see they're slightly different designs. So the Riot was using somebody else for a period of time or an older GIGA solution. And now these ones are getting dropped in, are branded giga. Right, but they're just crypto type of units. Yeah, Giga, that's how they got started. Is doing the full vertical manufacturing. And then sales of these made so much money doing that in crypto, they turned around and were like, great. We can actually now start owning the data centers themselves and, you know, being in the development space now. So this site here is a riot site. This here is an expansion right now. Like these two additional data centers here. This still looks like an active storage facility, but I don't know.

Michael Byers-Norton - 17:14

And this is a old power plant or a metals plant that apparently has gone defunct and broken. So, like, part of me is like, this is a super fun site. We gotta be really careful here. This is underneath the 500 year floodplain. Like everything is. And only a little bits above the 100 year floodplain or in 100 year floodplain. I'm that up. Most of this is 100 year floodplain. This little bit here is 500 year floodplain. Like, I'm just like, dude, that's kind of sketchy.

Tucker Adams - 17:38

Yeah.

Michael Byers-Norton - 17:38

You know, there's not a whole lot more space to build. We got to demo this. Like. But the. The power here is crazy. Like six different 138 lines come together here. And you'll see just this area of Kentucky is just super developed for energy. Like, all these are major industrial plants chasing energy. So it's like strategically, people who are not as paranoid as I am are in love with this area to the point that even Brookfield is buying up shit in this market. They're trying to build a brand new large facility one town over here. Like this is. They're trying to put an AI campus on this massive plant. So, like this area of Kentucky is blown up. It's going to happen.

Tucker Adams - 18:19

Yeah.

Michael Byers-Norton - 18:20

Of course, Scientific also is trying to get land going over here for another data center. You see a little piece is already starting to go. So it's happening even though it's not in a traditional zone. So I'm like, dudes, what's the downside here? What are you being asked to do? Because if we're now funding this is pretty high risk. And Giga is only want to do it because Giga's pre leased their capacity to amd. So AMD is actually the one backstopping this entire acquisition and new development. But Giga needs \$6 million to keep it on the rails. So here comes Triple Point saying oh really? Well show us the contracts between you and amd. Show us what you're really trying to do here and show us what we're going to get for it. And they're super excited to be part of it.

Michael Byers-Norton - 18:59

And there's nothing we have to do besides just put money at risk. That's all Triple Point is trying to do. And so it's an interesting play in that regard, but it's not one I've been exposed to a lot where you're just trying to be in that early capital piece. And Giga's not trying to make a powered land sale here. They're trying to get a 15 year return on some sort of value because as soon as that revenue is realized, they can go sell that investment to make their piece for their family offices. So even looking at a site earlier today that I was pretty negative on as well, I love the potential dirt. It's this piece of dirt right here. 190 ish acres, some pretty significant wetlands on it. It's also showing currently on FEMA and the hundred year floodplain.

Michael Byers-Norton - 19:43

But they try to, when I challenge them on, they shared a doc showing getting upgraded to 500 year floodplain but power next door they already have 70 megawatts of power for it, pre batch zero. So they're pretty confident they

can deliver the power. And those guys are trying to flip the site and they paid way too much money for the site. Like it's one of those they're trying to charge above market to us. What are we really trying to do here? But they're like no, if we can go get Sky Vault to take this or Giga to take it, we'll get a land lease on it for a certain amount of money a month and we'll potentially even get a little piece of the PPA on it. And that's enough to hit a beautiful ROI. If that's a 15 year lease.

Michael Byers-Norton - 20:23

And that's their approach. They're not trying to do the crazy shit you and I are of either value creation as a data center or flipping the land as our only revenue sources. They're being a lot more nimble of just trying to fit in and get a small piece of this. And that is just what I'm trying to learn how they're going about this very heavily. But they're looking at sites right now. They're negotiating deals right now in real time just because they have family offices, putting a couple million here, a couple million there, but they are trying to raise a \$250 million fund overall. And that's a bigger point, is. Yeah.

Tucker Adams - 20:54

Holy. Okay. Are they. Are they paying you hours just for, like, consulting on these projects?

Michael Byers-Norton - 21:03

At this point, they're trying to make me a managing partner at the company. And I don't know what that means. Like. And I. I gently try to push one of the guys on it. He's like, dude, I haven't been offered a yet either. I just know that the guy running this is a gangster he's coming out of. So Alumni Ventures just won an award on Pitchbook or some being the top AI venture capital group right now over the last year, and he's the top earner of their AI vertical right now, and they're blessing him to stamp his own fund outside of Alumni Ventures. So that's where everyone's like, dude, this dude doesn't around. And they think I'm their secret weapon. They think I'm very valuable there.

Michael Byers-Norton - 21:42

I told him, like, hey, great, guys, I want this going, but if we're going to chase these number of sites and we need quality work, we probably need to spin up a retainer with terabytes so I can have people I can throw at it besides just me. But they're. They're thinking big, and so I don't. I'm going out there to have dinner with them in two weeks. Yeah. So that's going to be my way to, like, start trying to fit pieces together here of like, dude, just explain to me what's really going on here. But for right now, seeing the people bringing them sites that are asking for, like, 6 mil to cover, you know, deposits or keep the site afloat, and they're really interested in supporting those people. That's.

Michael Byers-Norton - 22:19

That's like, the dude, anything we bring to them, we can bring them and talk about it type of moment. Like, they're genuinely willing to go look at these sites, which is putting me in a weird Spot how do I guide to what good looks like? But that's where I'm re pivoting. If we know the end users here. Like he's already had meetings with Meta, amd, Nvidia, Microsoft and one other big group I can't remember the name of.

Tucker Adams - 22:43

The alumni guy has.

Michael Byers-Norton - 22:45

Yeah, he's just using his networks to get in front of these people right away and pitch them the program. Like hey, we'll build, we'll find sites just for you the way you want them. Because we know that's the problem you need us to take care of. We'll take care of it.

Tucker Adams - 22:55

And wait. Dumb question. Triple point is this AI spin off of Alumni Ventures? Am I understanding that correctly?

Michael Byers-Norton - 23:03

Yes, sir. Okay,.

Tucker Adams - 23:06

Let me, let me ask you an entirely self serving question here. Yeah, I remember you seeing you on. Wait, which is which guy is the killer? Can go back to the team page David Beasley.

Michael Byers-Norton - 23:22

Yeah, that guy.

Tucker Adams - 23:23

Okay.

Michael Byers-Norton - 23:23

So yeah, he's the one that people are hyping. He's a former semi pro athlete. Like it's just a very good vibe guy.

Tucker Adams - 23:30

What sport?

Michael Byers-Norton - 23:31

Football. And apparently he got drafted into baseball. And I've only heard that from this dude. I haven't talked stories with him yet.

Tucker Adams - 23:36

Interesting.

Michael Byers-Norton - 23:37

But he was like, he's like, hey, September 2nd tomorrow. It's a really important day for me. You should figure out why. I'm like, dude, I have no clue. It's your anniversary. So we got our meeting on September 2nd. He's like, yeah, this was the day that were the biggest underdogs in college history and we won that game. And he was scored a touchdown in that game. And so it's just one of those like funny, Northwestern beat Notre Dame back in like 95 type of shit. He was just a super sport junkie and you google his name. He exists. Like there's articles written about him and shit. This guy is just a nerd hustler, more neurotic than I am. Uses AI very heavily. But he comes from oil and gas as a landman and does. Yeah, they've been investing together for like 20 years.

Tucker Adams - 24:21

Damn.

Michael Byers-Norton - 24:22

Like, so this is a fucking tight team. And Bill Newman brought me in. Bill already pissed him off because he wanted to get paid. He's like, I can't be doing free chicken work for you. And they're already like, Bill doesn't want to do any work. So he's already kind of leaving the moment. He's just stuck as an advisor where they're trying to make Me imagine partner. So the way I look at is like, great. They're doing the same brain rate that a lot of my clients do. We might get a retainer out of them, might get a bunch of reports out of them, but I'm getting exposed to a huge amount of the market and seeing what they're willing to invest in is like, dude, if we pitch something to them, let's go.

Michael Byers-Norton - 24:58

And I already brought up the edge to go sites to him. And that's where this guy realized, oh, we can just flip this whole portfolio. Knows how to do it.

Tucker Adams - 25:04

Yeah.

Michael Byers-Norton - 25:05

But at the same time like, dude, if we just snipe the best 12 sites out of it, they're like, yeah, great, show us. You know, they weren't excited about it, but they were willing to listen. And that's kind of like if we had a pitch together and were able to point at sites that then we're in a different zone. Which brings us.

Tucker Adams - 25:22

Sounds like.

Michael Byers-Norton - 25:23

Sorry.

Tucker Adams - 25:25

Okay, I have another self serving question after this, but I'm gonna talk this one out first while it's still fresh. Ish. I arrived at the same place that you did at the same time when you're saying that like the next step for this I think would be having a proposal together for, hey, like we have looked at these 12 sites individually. We think that we could sell them to. Well, realistically it'd be like, Damon, we think you could sell them to your people at xyz. Here's the work that needs to be done for each. Here's the potential return. Here's like the slice of the pie that we would want. Obviously we would ask for more than we expected to ultimately get. But I agree that would be like the next step on that front.

Tucker Adams - 26:14

And then it would be a matter of we're asking them for, to put up the funds and we're saying that we will go do the sweat equity to, you know, actually execute on getting those sites to pre lease. Right. Are we thinking about that in the same way?

Michael Byers-Norton - 26:32

I think so. It sounds about right. Okay.

Tucker Adams - 26:36

The self serving part is if they make you a managing partner instead of an external person bringing them, you know, sites to potentially invest in, is there any capacity for me to be part of that puzzle at that point? And the answer is I like eyes open. Can be, no, there's not a lane. But I'm interested to hear your thoughts, if you have any.

Michael Byers-Norton - 26:59

No, it's a. I don't see a lane right now because I don't think they're talking about scaling but they're just trying to be a very small gunslinger of a company right now. And that's kind of where I don't understand even my comp on it. I might not get paid a couple years on these currently. I really just don't know.

Tucker Adams - 27:15

Okay.

Michael Byers-Norton - 27:16

But that's also where the sub projects I think is where you can guarantee a future a lot easier. Right. Like and that's kind of where I'm trying to think about terabyte. That same lens of we have so many people around us like the path ones, the prisms, these sites that keep coming up.

Tucker Adams - 27:30

Yeah.

Michael Byers-Norton - 27:31

Should we be packaging those to seek investments? That's all these guys are doing is willing to throw money at them. That's it. Like it's not with.

Tucker Adams - 27:40

With the. The work on our end being twofold. One, identifying and packaging and selling the idea basically that implies that we don't believe in it. Finding sites that we believe in and then communicating why we believe in them. Right. To these potential investors is. Is the upfront work and then presumably also having you know managing whatever work needs to get done to get those sites to the end point that we select. And right now I think you and I are discussing that endpoint being pre lease, pre leasable powered land.

Michael Byers-Norton - 28:25

Yeah everything we're just pre leasable capacity. Let's stick with that for now. Yeah. Right. Because so pre leasable capacity could be a land, could be a building, could be space inside a building. But it's just. Yeah we're trying to pre lease. They're trying to enable investment essentially and Triple Point appears to be focused on that investing in enablement side. They're not trying to raise billions of dollars to go vertical on projects.

Tucker Adams - 28:51

Yeah.

Michael Byers-Norton - 28:51

They're just trying to be very high impact for small amount of money is their strategy. But yeah for new edgeco though 100 like you're nailing it. Like we're just. We know how to identify, we know how to model and assess, we know how to productize and we know how to position. So that's why they're excited to be putting those abilities inside of Triple Point that me as an advisor to guide them through that effort.

Tucker Adams - 29:15

Right.

Michael Byers-Norton - 29:15

But great. It's. They're not putting handcuffs on me. Let's do this right. Let's. Let's provide those four simple things as an easy button for them to invest in.

Tucker Adams - 29:25

But I guess like the thing that I'm going back to is are they just going to want you to do that in your capacity as managing director as opposed to having any other kind of structure or mechanism like New EdgeCo.

Michael Byers-Norton - 29:41

Well so I think that's where the sharpness comes out. Right. So I'd say I was managing director, I was making returns on and I brought a site to them that was New Edgeco site that I was a part of that new EdgeCo SPV. Is that a conflict to you guys or not? You know like what how do we do this safely? Is something that could be impacting myself. But that's where having you as part of that SPV means great. If I need to step out of the SPV for conflict of interest perspectives it doesn't necessarily have to over you but we're doing underneath terabyte. You might be getting along with me on that. Right. Like that's.

Michael Byers-Norton - 30:20

And that's like being ready for that negotiation approach is something that I'm trying to learn how these guys think

because they speak just a slightly different language than I do and just they know more tricks on how to get money out of these things because they're not trying to go for the big greed which is the world I've been living in.

Tucker Adams - 30:37

Yeah.

Michael Byers-Norton - 30:38

Dollar per megawatt in multiples. They're like dude, just a land lease on us alone, that's huge. If we can get half a penny on this ppa it's huge. Like we don't need to go shoot the moon here. Dude, chill. And so it's a. Yeah. So I think we need to be keeping that heavily in mind about how we do this and if we are going to be doing this I need to start reviewing with them. Hey, is this something that fits with your machine or not? Because if it does then we should be starting to put things together if otherwise. You have to remember they're trying to be a machine for specific off takers requirements. They're trying to basically productize sites for these off takers where they know their requirements already.

Michael Byers-Norton - 31:17

And the one off taker Sky Vault is since they're kind of vertical ish beyond just the data center. Yeah, I mean a million dollars a megawatt isn't out of the mind at all. But they're able to address a lot more higher costs on that. So that's what they're just happy to be that small group in between. You know, get control of the site for a certain amount, clean it up to position for these guys, make the transaction and if they're part of that as a land lease they're kind of path to money right now because there's no path to being Part of the joint venture to own the data center, like with that group. So it's just. That's their machine. And so do they really care where the site came from? If it meets their requirements, that should be a positive. Right.

Michael Byers-Norton - 31:59

And that's kind of where I don't feel like there's a major conflict of interest there. Even if we don't have them as an investor in new EdgeCo, they invest in New Edge code, then it's flowing through them, dude. Right. Like that's a thousand percent synergy then. Because we don't have to stress about that conflict at all because now they're owning part of the spv.

Tucker Adams - 32:18

Yes. And the counterpoint is they say we're already paying you as an md anything, you know, any work that you're doing to identify sites and bring them to us will be. Should be done in that capacity. And why are you taking a separate cut? I'm not saying that's what they will say. I'm just saying that is a. I can see that being the case. Right.

Michael Byers-Norton - 32:43

So I have to be above water with them, dude. I have to be collaborative in nature and kill this if I need to kill it or don't like. But it's. That's where either they fit or they don't fit. But I think right now I'm seeing signs that they would hear our pitch and then they're looking for opportunities like this. Interesting. Okay. And if we're going for sites that have power, they know how to position us. Like, that's where they'd be excited to be playing their game. If we're just trying to get out of the Power Land side for New Edge code, I don't see. I don't see a fundamental conflict there, but that's to be discerned. Right.

Tucker Adams - 33:17

So let me ask you this. Do you think that we do that we put together a pitch in the next two weeks that you bring to that conversation, or does the conversation happen first? You assess whether there is any space for us to be separately bringing them sites. You, like, allude to having, you know, align on a potential portfolio of small sites or something like that, and then we sweat after that conversation has already happened. Like, what do you think is the efficient way to do this?

Michael Byers-Norton - 33:54

If we could have a number by that time? Like, what are we looking for that. That's not a bad thing in the slightest. Right. Like when we need 4 million to get our machine up, we need 2 million to get our machine up. Like whatever number we think we need to jump start whatever we're trying to do and then be able to relate that to. Yeah, we're asking for that 2 million because we have path on these 10 sites that total, you know, 22 megawatts across. Yeah..

Tucker Adams - 34:23

I was gonna say, if we're doing an actual pitch, I think you bring that request along with the initial portfolio that you think you're going to go after because then you can say, you know, this 200 grand is going to this half a mil is going to this, blah, blah. Right. You want to be able to be very specific about where everything is going.

Michael Byers-Norton - 34:47

Yep. And after seeing their decks, like their sites that they don't yet control, that they are clearly stating their decks they control. And so that's kind of where. Yeah, I'm noticing everybody does this. Like, I think we're being way too slow and paranoid on the comp ground side for that reason. Like, you know, right now we should be saying we control the site down in South Texas, but we're not putting that in our materials.

Tucker Adams - 35:11

So everybody's just talking to everyone saying that they own a bunch of shit that they don't.

Michael Byers-Norton - 35:16

No, it's the big term of control. What does that mean in court? Because these are pitch decks, dude. These are dreams. Like, and that's what honestly, Triple Point keeps stressing is, like, there's a lot of these projects where you don't want to give them too many details. They don't care. You don't want to be overly smart on these. Like, it's easy. It's better to have a budget, take them out to dinner in the strip club than it is to actually like overwhelm them with proper diligence in the pitch. And I'm like, good. Because I, I live on the proper diligence of pitch side. Yeah, this is a synergy. Great ways here if you know how to hone my message to be impactful and you can get it done. So it's like, I respect that.

Michael Byers-Norton - 35:50

I hate it, but I respect it especially to be in the game for so long. So it's. Let them do what they're doing. It brings back around an interesting idea here. Should we be trying to engage with path one to say, hey guys, what about those sites that are smaller in nature? You know, would you be willing to potentially go after those together?

Tucker Adams - 36:12

I mean,.

Michael Byers-Norton - 36:15

Just the separate. That's all it is. There's. I don't think there's downside. We just gotta do it.

Tucker Adams - 36:19

Yeah.

Michael Byers-Norton - 36:21

But kind of should, right?

Tucker Adams - 36:23

I think we should put me on the thread also. I'll write it up.

Michael Byers-Norton - 36:28

Yeah, so I think that's. That's essentially the thing I want to push, because if we can get that's technically 45 megawatts of power. That's technically enough to be able to. Yeah. Let me restart my screen here. Just this list alone, the 13 sites. 14 Sites.

Tucker Adams - 36:53

Yep.

Michael Byers-Norton - 36:53

Yeah, 45. 5. And even if they take these off of that list. Great. Now we're at 10 sites. That still totals something significant here. Right? 26 Megs. And I haven't mapped these out yet. I don't know where these are, but they read like they're all in the same county. So as long as they're within 20 miles of each other, it lines up with that pitch in Thesis. Like, hey, guys, I have potentially nine sites here that are all within touching zones in Moana County.

Tucker Adams - 37:24

Is that substation name?

Michael Byers-Norton - 37:26

No, it's straight up. Oh, it is, yes. Technically. Yeah. There's just a snapshot. I wrote this down looking at a screen. I can call up Giles and Kevin and be like, hey, guys, need to reconnect. Jim, the CEO, is out of town for the next two weeks, though. Yeah, but this is also one of those of like, dudes, let's talk deals. Because Jim's problem is

delivering the shit. Not doing what you and I are doing right now. Like, so it's. It's interesting, right? Yeah. Okay. I have this attached to the email I'll send you at the end of the call. So you get a copy of this here at the end.

Tucker Adams - 38:01

Perfect. Yeah, send that to me. And then I think there's just a little bit of math first. Well, I'll say I'll. I'll finish the initial thought and then I'll go to the question. There's a little bit of math of where do these sites stand today? You know, if we have specific information on each one, that's great. If not, then we, you know, kind of take some estimated guess about where things sit today and the amount of investment that you would need and what you would be able to sell them for at that end point. And then that's the. The size of the pie. Right. And then you use that as your super baseline number to try to get triple point interested in that transaction. Question being, do we have any of that information about where each of these sites stand right now? Are these.

Michael Byers-Norton - 38:54

My understanding.

Tucker Adams - 38:55

Good.

Michael Byers-Norton - 38:55

Yeah. These are green fields adjacent to substations with power. And so that's. Don't know how adjacent. That means like there's definitely a trust and verify moment and all that. But the whole path one approach has been strong community engagement across states where they have good strategic alignment.

Tucker Adams - 39:14

Right.

Michael Byers-Norton - 39:14

For the community and those local co op utilities to bring them sites that have power. Do you think that, sorry..

Tucker Adams - 39:24

Is that relationship at a point where you could ask for more specific information and share like you know, we'd be interested to potentially transact and develop these. We have this other group that is you know, trying to invest in this space. We're not going to try to shop it anywhere else or anything, you know, I guess did they trust us enough that they would share that kind of information knowing that we're not going to try to do anything shady and go try to get control or something?

Michael Byers-Norton - 39:52

It's a major in theory because I had the discussion with Jim when he was here in Denver and we're going through the sites they have in their funnel and I was stressing to him like dude, how many sites are you really trying to do?

Tucker Adams - 40:05

Yeah.

Michael Byers-Norton - 40:06

And where do you have time to focus on these? Because these smaller ones aren't a lot of return. Like there's enough there for a small team to be interested. But you already control three sites at 25 megs each.

Tucker Adams - 40:17

Right. They should, they shouldn't be with these.

Michael Byers-Norton - 40:20

100 And so that's kind of where I'm looking at it wise and if like I even try to do that back in the back of math as I maybe built this one on bullshit with you. Right. Yeah. If we had a certain number a month and we thought about the certain amount of pre dev capex we would need, you know, we can start to put together that budget essentially what we go ask Triple Point for. Right. And that's kind of the way I'm thinking about it and that's where it's a good way to cover like your costs type of thing like get money in from a headcount and hours perspective but then also be able to kick off the diligence we need to make each one of these pre leasable.

Michael Byers-Norton - 40:58

And if we're doing a partnership with Triple Point where we know their end users skew. Right.

Tucker Adams - 41:03

I think is. I think you and I both know this. But just to say it out loud, I think that having a line to somebody who is going to off take these is pretty crucial like fundamental to this being a viable way forward. So like this, I think having Triple Point as partner slash investors could be a great way forward if they're interested in it. Sorry, you had the answer on the sheet that you had up before, but I didn't get to fully read it. What's this story with the all true guys?

Michael Byers-Norton - 41:42

So I haven't read the email enough. So that's where Scott emailed yesterday saying hey, I'm game on the asset management play. Because when I brought up the asset management aspects of these sites, that wasn't something that got the Triple point guys excited. They're like, yeah, that's a lot of extra work, why do it? And so I knew that for Altru their thesis is asset management. They want to get established revenue generating sites to take on and then down the road can put together separate business cases for underwriting of densification. They just want to manage existing assets. And so that's where. That's their whole play. Because he comes from a capital world. Right. And so they're used to the use of that. So it's a. This is interesting. Right.

Michael Byers-Norton - 42:29

I think it's one of those like okay, if that's the case then let's go look at acquiring these sites and their sites have additional power on them. That fits your thesis. Right now for your current investors you're lining up and if there's.

Tucker Adams - 42:43

Are you thinking about them? So yeah, just to quickly clarify, are you thinking about Altru being in the picture for the 12 sites that were just looking at the path one sites or the.

Michael Byers-Norton - 42:55

Yeah, who path one or greenfields. So the Unity sites that were revenue generating where they weren't allowed to leave those sites like they had to legally stay active in them. That's where All True is an interesting play. So this brings back to a bigger picture. Right.

Tucker Adams - 43:11

Are the Unity sites, the wind switch sites?

Michael Byers-Norton - 43:14

They're the carrier ones. So I'm starting to use their names. I apologize for that. Yeah, yep. So don't use that name outside of our circles. But yeah. So it's basically if we are going after carrier sites as one of theseses for new Edgeco that are already operational and can't shut down, they have to stay operational for legal purposes for the network. But they don't want to deal with them, they don't want to identify them, they don't want to keep them on their books. That's where using a group like Altru to take over the triple net lease ownership, they don't necessarily have to operate the site. If the client still wants to operate like a triple net lease, All True is happy to add those sites to their portfolio. So that enables another potential off taker.

Michael Byers-Norton - 43:58

Machine strictly for that business case where new EdgeCo has to go negotiate those sale leaseback agreements, which are not easy to negotiate. And there's an off taker right there. They're basically an off taker for those sites. I don't think they're an investor necessarily, though.

Tucker Adams - 44:17

You don't think. All true. You do not think Altrue is an investor?

Michael Byers-Norton - 44:21

Yeah, I don't think they're a speculative investor right now. And that's where we need to read Scott's email a little bit more in detail here. I'm trying to find it. There it is. Found it.

Tucker Adams - 44:31

He said in principle, yes, all true as a service is the right way to position the platform. Now until we have the cat capital to come at those opportunities as a JV partner.

Michael Byers-Norton - 44:42

Okay. Why did I think that was such a more positive email? Interesting. Wednesday, September 9th. Yeah. Was the one yesterday. Yep, that was the email. Okay.

Tucker Adams - 44:52

But he's. It. It mentions. Please see the expanded notes, which is not on the email that I have.

Michael Byers-Norton - 45:01

So send. Yeah, that's the one where I. I'll share that with you. Right now that you built that list. He wants that spreadsheet from you. He wants to be able to go through and pick a pilot site from that portfolio of Unity sites.

Tucker Adams - 45:13

Oh, okay.

Michael Byers-Norton - 45:14

Yeah,.

Tucker Adams - 45:17

Yeah. It sounds like they are being the, you know, being paid to be asset managers as opposed to being investors.

Michael Byers-Norton - 45:26

Yeah. So basically we would be riding with them in some sort of context where we'd be getting paid by them for the transaction. And so either we get a. Yeah, so if we sell the Unity site to Altrud be the one paying us more likely. And so that's where if we were negotiating with them, we'd either get a percentage of something there so it'd be added to their books, or we'd say, great, we have this type of joint venture agreement for densification coming into the site. Like we'd have to make a structure like that if we're going to try to add workload to the site to further monetize it and raise its value.

Tucker Adams - 46:04

I was reading. Yeah, yeah, I was reading. His email is like they don't want to own it right now. They just want to be paid a service fee to manage it.

Michael Byers-Norton - 46:15

So that was the first part of the call. And so that's like I was trying to feel that out from Andrew as their owner's rep guy, the super nerd and ultra Digital. And he's the one who offered us to do a turnkey program for development and then Also offered to do one for design and vendor selection. So that way you can start pre leasing these sites. So when I first got back up with Scott I'm like hey is this program existing right now? Like what's the status of it? Because if I go raise funds to try to raise a site to a certain level that could be a shitload of work to you. Because I need to outsource that work. Gets back to like Mike and Tucker can't do all this.

Michael Byers-Norton - 46:56

We have to get vendors lined up depending on where we're trying to get off that bus. And so it's one of those where I needed to re engage with them on that front but then also explain to them like here's what's going on with these huge number of sites running across. Are you interested in. It isn't that they have existing revenue. And that's where he came back with this email saying yeah, that's interesting but it's. And that's the asset acquisition angle.

Tucker Adams - 47:22

I guess I'm still just reading this as them being generally not interested in the asset acquisition angle. Now.

Michael Byers-Norton - 47:35

New EdgeCo sales tax.

Tucker Adams - 47:36

Oh, sorry. I was looking at the other paragraph and we are open to exploring the asset acquisition angle. You're right, you're right.

Michael Byers-Norton - 47:43

And then Altru as a service is the other one right now. And that's the right way to position them as a partner. Right. Or as a service that we can use. And so until they have capital to go out to the opportunities, you know they could be a JV partner type of thing but basically they're going to be a, they're going to not they need to be as a service paid for the expertise they bring to the table. And that's from an execution perspective that's getting developments done and getting the engineering back house items done. So that's where if we were raising more than that \$2 million and actually we're trying to get these pre leasable so we can move in equipment different play and that's an option here. Right.

Michael Byers-Norton - 48:25

If we wanted to go grab these 14 sites with path one and we are in charge of building on it. So we're the ones negotiating with Giga to buy their units. That's where we'd have to have a little bit more budget for that pre design and pre engineering like we'd have to. We're going to be accountable for those service level agreements. That's essentially what Path one is trying to become right now. Like they'll build, own and operate that data center so if we wanted to go that route, we technically have resources that can do that with us that are coin operated. So that's the other distraction that I just don't have time to really chew on. It's such a bigger solution. We would need a much bigger stack of capital or know that we have access to it.

Tucker Adams - 49:09

I don't know if I'm just dreaming too small, but that does feel like, that feels like a stretch right now. But I also haven't been on these calls where these guys are talking about \$10 million like it's nothing. So maybe I am just, you know, maybe I need to dream a little bigger. How does any of this change what we need to do? Go ahead.

Michael Byers-Norton - 49:31

It doesn't. So I think this thing here, this applies to what I want to bring back up in that list of questions I wanted to bring off to you. Depending on the amount of hours and focus we can put into this, like if I had the ability to clone you for example. If we dedicated real focus by we, I'm basically saying you because you know how scattered and honey I'm juggling like that is the focus attention thing. Because if one of these opportunities is that strictly carrier approach where they have to stay active in a site.

Tucker Adams - 50:03

Yeah.

Michael Byers-Norton - 50:04

Then this is a vertical we go after. We have to start beating the street a lot harder to get in front of these carriers. Preparing to go through the review of all these sites, like just the title review alone is a nightmare. And then actually knowing how to negotiate what they are. Is this to say a leaseback site? Do you want to keep operating as a triple net site or do you become a client of ours inside the white space? And that's a huge machine.

Tucker Adams - 50:29

And that vision is going specifically basically bypassing Rorscheid and going straight to carriers.

Michael Byers-Norton - 50:39

Yeah. And because the enabled energy has a shot to get us in front of Verizon and Lumen and then ironically Scott with All true has a path to get us in front of somebody who does this type of shipper AT T. So in theory those are like the four top carriers in the game right now besides Zayo Verizon.

Tucker Adams - 50:56

I, I saw that Verizon had already announced that they were converting some central offices to data center space. So like they're already. They're already. What's that?

Michael Byers-Norton - 51:07

They might be out of the picture. Right. Or they're so far ahead of this they might just be targeting 25 megawatt and above sites. Like we just don't.

Tucker Adams - 51:14

Yeah.

Michael Byers-Norton - 51:15

But we part of that risk. That's Part of the major opportunity. Major risk statements. So it's a.

Tucker Adams - 51:21

Well the. The risk is mostly time, right?

Michael Byers-Norton - 51:26

Yeah. Opportunity cost. Yeah. So back to reality. Right. Like if we look at where we are or what's quickly developing as opportunities for new EdgeCo there is the bigger emerging market play. I think we're getting pieces put together enough now that if we want to go aggressively after we could and that's either as just a straight powered land play where or asset divestiture play or it's a turn into assets that can be acquisitioned and managed like it turns into something real in a big way with many options but it still focuses us for this one New Edge Co vertical on purely carriers. And so that's the carrier approach for New Edge Co. Yep. Is one route. The other route is just powered land assets in. In general that are sub five megawatts.

Tucker Adams - 52:25

Yeah.

Michael Byers-Norton - 52:25

And we would align solutions around that realm period. Because if we can prove that those are financially viable then it's off to the races. And we see a lot of groups around us trying to do this within our current family alone there's like three of our clients are trying to do something like this but not super small. So if we had the ability to make these very targeted for modular. That's the other emerging market that's getting hotter right now is these modular type of deployments strictly for AI workloads that we can be trying to go after and those are like the two sides of the coin that we need to kind of figure out mostly due to the brain damage and hourly push that the carrier side could take.

Michael Byers-Norton - 53:06

And we have relationships to get into those worlds but it is still not a reactive type of world. We have to drive those pretty hard.

Tucker Adams - 53:16

Yeah, I think so like conversations that are upcoming and what do we need from them? I think if we can talk to the Path1 guys and get any more information about that. The 14 very small sites and run on those a little bit and put together a picture of this is the work that we would need to do to get these pre leasable. Here is, here are comps here the best comp transactions on stuff that small and what it means for what we could potentially sell it for. Then we are positioned to have the conversation with. Well you are positioned to have the conversation with triple point and you can come and you can say here's the math. Here is what the picture would be. Here's the work that we would do and we would love your money. Please give it to us.

Tucker Adams - 54:12

That's one version I think what, where else was I headed? I think on the carrier side, I mean ultimately we're still going to have to get funding to go after any of these. Right. And so if we're talking about the carrier side, either we're bringing that to Triple Point as a different opportunity or we're kind of back to square one for trying to go find funding to actually transact on that. Right.

Michael Byers-Norton - 54:44

So let's be reactive on the carrier side. Let's keep pushing that gently forward to see what sites we actually get out of it because we know rare shines, throwing some curveballs there and that's not going to heat up real heavily until October or getting closer to October. Right?

Tucker Adams - 54:58

Yeah.

Michael Byers-Norton - 54:58

And the idea there would be we snipe a dozen sites as a investment that Triple Point could come in and help us with. But we would have to work to control those sites. We'd have to identify them and now we get a path to it. But that control would launch that program forward.

Tucker Adams - 55:13

Right.

Michael Byers-Norton - 55:13

So I think that's the safest place for the carrier route to go right now. Yep. And if you wake up in the morning after or you have a dream in the night and you're like no, we need to go harder at this, we can always pull the trigger and go more aggressive. But like right now the carrier side is probably safe for that route.

Tucker Adams - 55:26

Okay, that sounds good. And then agreed on the powered lands 14 site front. Are we gonna, we're gonna ask for more information if it, if the, if path one will give it to us and if not, we basically just make the best guesses that we have available in terms of the quick economics of what buying, developing to pre sale and then selling those sites would be.

Michael Byers-Norton - 55:56

Yeah, exactly. Like just put together a solution with them on that front especially. Yep. So I think that's a good two steps that way from a market perspective. Right. Like internally just getting ready for business cases. Yeah, it's gonna be the item. And I tagged that in this email. Yeah. All right, so I got three minutes here. Unless the client aggressively pushed me to jump on a bridge. So I might have to panic jump. But yeah. So we need to figure out by just going through this together, we gotta figure out the framework here and just figure out how I don't abuse your time, how I make sure you're good because that's just front of mine in general across everything. You and I are doing so very happy to make this a properly rewarding thing for us both on that spv.

Michael Byers-Norton - 56:44

But let's get that shit figured out asap. And as long as we have that figured out and enables us to know the position of how we negotiate with groups like Triple Point.

Tucker Adams - 56:54

So when you say that like what questions are in your head.

Michael Byers-Norton - 56:59

Between you and I? Yeah, I don't know. Do you need to own 50 of the company? Like, do we need to have a major one? Like the only question I have is like around more terabyte aspects of it. Like we could be doing this as an SPV with terabytes part of the SV ownership. Right. And so that's an option there. Or we can just be keeping terabyte as a tool that this new company could use. So if we needed to throw hours at it, reports at it becomes a vehicle as a partner.

Tucker Adams - 57:28

You know, just what is the advantage of having terabyte be a part owner?

Michael Byers-Norton - 57:34

I don't think they're.

Tucker Adams - 57:35

As opposed to Mike being a part owner.

Michael Byers-Norton - 57:38

Again, I don't necessarily know if there's an advantage there, to be honest with you.

Tucker Adams - 57:41

Okay.

Michael Byers-Norton - 57:42

So. But it. Yeah, so that's, I think probably don't utilize terabyte for the spv. And if you and I want to set up buffer LLCs, that's something probably should think about pretty heavily. If you need Adams Devco1, that would be your ownership of the SPV. Need to start wrapping our heads around that. Right. And the big thing here is like, I think we need to have that as an SPV to be the controlling entity here.

Tucker Adams - 58:08

Yeah.

Michael Byers-Norton - 58:09

So own that outright. Something I need to put off your mind here is do we include like a person like Greg Ness or Greg Ness in this because he's terabytes council, that helps on development side. He's a bit owner in comp grounds. For that reason. They'll spin up the LLCs for us and be that main negotiator and lawyer on it. Or do we want to have that as a cost? Right.

Tucker Adams - 58:32

I mean, I was just gonna say like I think I do a little bit of back of the envelope slash naturally asking Claude about what the realistic costs that we are looking at are and then how that compares to just having him be part of the. The spv. My gut reaction is to have him be part of the spv, but I. I'll check, make sure that seems reasonable.

Michael Byers-Norton - 58:59

Yep, exactly. And I know nobody else does that. Everybody else just has a council on retainer. Right. So we're the only ones, like when I talk to Triple Point, like, yeah, we have a great bank of lawyers. Path one like four Badass lawyers. Like they. Nobody's. They're doing something else, but either way.

Tucker Adams - 59:14

Like, they're talking about a lot different dollar signs than we are. For now. I think in the future, if. Once again, I think everything is about proof points here in the sense that if we do one of these transactions, maybe we dream an order of magnitude bigger on the second one that we do. But for the time being, I think we're staying limited to our abilities, you know.

Michael Byers-Norton - 59:43

Yeah, I like it. So let's keep it simple. Is 50. 50 Enough to get you excited or am I giving away too much of the shop there?

 Tucker Adams - 59:50

I mean, my baseline expert or, you know, whatever assumption was 50 run with that, dude.

 Michael Byers-Norton - 59:58

Yeah, Yeah. No, and it's proper, right? Because the same thing I'm like when I first pitch it to you, like, I need. Need you to be owned and driving a lot of this because it's just another monkey in my back otherwise, so. But okay, so let's keep that going. I need to engage with path one. So we talk through that and I'll keep you cc'd on it as soon as you're terabyte email until we need to dance. We do need to get a tracker put together both from the site perspective and the demand perspective. Just, we need to start being just a slightly more organized systematically as a new company, essentially.

 Tucker Adams - 01:00:36

Yeah, agreed.

 Michael Byers-Norton - 01:00:37

And so reflect on how you want to do that.

 Tucker Adams - 01:00:39

Yeah, yeah, I was thinking about it.

 Michael Byers-Norton - 01:00:43

Yeah. So like those 12 sites. What the are those 12 sites? Like. I know what you mean, but I don't know what you mean, you know, so get a tracker going there.

Tucker Adams - 01:00:50

Yeah, yeah. No, I was thinking I had the exact same thought earlier in the call. It's amazing how much like half of consulting, as far as I can tell, was just having a consistent name for things. Like, it's. It's amazing how much easier everything is when the language is the same. Anyway. Oh, you're. You're two minutes over already. Okay.

Michael Byers-Norton - 01:01:16

Yeah, it's. Unless you're two minutes over, but I'm okay. My have a big call here in an hour when the client just double booked me for it, so I got to deal with that. But I'm here in a few. But I got to go present. I added that to the email here. I'm presenting this presentation to one of the bigger construction companies and landowners in Chicago. And so it's Triple Points Portfolio. It's trying to basically be their land team for developing sites. And a good three or four of those sites are smaller edge Sites as well.

Michael Byers-Norton - 01:01:46

So it just highlights again, if we have a machine to develop those sites beyond Powered Land, we might be able to be applying that as our way into joint ventures with Path One as our way into joint ventures with Triple Point for anybody who's bringing small sites in. So just. We just think about that. Just that's. That's the seed implant in the back of your head for let's go big type of moment. But we don't have to. But it is still just this market's emerging, dude, pure and simple. It's starting to get real. It's not me anymore because I've been this for way too long, but it appears that the fundamental math and attraction is starting to finally be real. So.

Tucker Adams - 01:02:29

Damn, I love fireflies. It is so great to be able to just say this out loud and know that I'm gonna be able to reference it later anyway.

Michael Byers-Norton - 01:02:36

Yeah,.

Tucker Adams - 01:02:40

It sounds good. On the way forward.

Michael Byers-Norton - 01:02:43

So building custom model big.

Tucker Adams - 01:02:47

I mean, we have. We have the bones of that, right? Like, we have. We've done the work.

Michael Byers-Norton - 01:02:52

This is all minor ship that we will repackage 100%. And that's the same thing as the model. I just want to tweak that downward in scale. But I still think the model you have right now is a very good place to start. The more I learn about revenue being made from like, land leases and smaller other gotchas that I'm seeing, Triple Point use indicates that we have more to learn. But from what we do as a tool to know what the land dev returns are and then the data center returns are, I think it's great. We just make sure that works in smaller scale.

Tucker Adams - 01:03:25

Let's bring that up again on a future call because I'm interested to hear what kind of things you're seeing.

Michael Byers-Norton - 01:03:30

All right. Need to do research on value for the sites. It was interesting hearing one of the guys inside of Triple Points Network just saying, yeah, just add like 5 million to the purchase price of the site and they'll buy it. Like it had nothing to do with dollar for megawatt. What?

Tucker Adams - 01:03:45

Yeah, these are the same guys who have taught. Because I'm saying all of this because I was looking back through the transcript of the call that we had a few. Few weeks ago. It was like, yeah, like people are coming in and making up numbers and the exits are just like, you know, random multiples of their guests of, you know, megawatts and stuff. But it kind of sounds like they're doing the exact same thing.

Michael Byers-Norton - 01:04:07

Yeah, it's literally the Same thing. And the reason I cannot rip into them too much, it's because I believe the off takers right now are ones who are better positioned to care about total cost of ownership. They want to know those chips can actually get up and get going. And for the smaller sites, if they can talk to each other, if they're close enough distance to act as one site with fiber, the performance enables them to be profitable and then sign to markets the extra adder on top. But I think it's really this is part of that emerging market component where groups are becoming more integrated. Like the big Sky Vault has a very large financial backer on it underwriting all the data center manufacturing pieces. And that's also related to the financial backer underwriting all the chips.

Michael Byers-Norton - 01:04:53

So their ability to collude together naturally is what they do. And that means in theory this front end capex is much smaller in number to them because they're a factoring cost of chips as well. So fundamentally we probably should be charging three times as much. Right. Like it's just. Yeah, so I think that's really it. So but I highlighted like the action items here. So get a tracker going for sites, get a playbook going, basically another tracker essentially.

Michael Byers-Norton - 01:05:25

Or just some way to know who we take sites to and why we take the sites to them and how to pre stage for them like preparing for that SKU and productization approach and then you know, have a good funnel that we're pressing hard and then getting the tracker set up so we can just actually benefit from this effort and not just have to be lost in the email abyss and then tweaking our assessments and if we want to keep using scores we can to be for those edge sites like just kind of own everything that terabyte's doing right now to be customized for the smaller sites and then that would align with that customized password model fundamentally and just keep doing homework so we know how to negotiate when it comes time to exit these things.

Michael Byers-Norton - 01:06:06

We just kind of know what they're worth. Because 250k to 500k a megawatt doesn't really move a lot of needles. But getting a land lease on that site for 15 years might move a lot of needles. Right?

Tucker Adams - 01:06:15

Yeah.

Michael Byers-Norton - 01:06:16

So it's different play, man.

Tucker Adams - 01:06:18

Yeah. Cool.

Michael Byers-Norton - 01:06:20

But there you go. I think it was a productive call. Hopefully this is very productive because that's a big deck and let's see. Oh yeah.

Tucker Adams - 01:06:31

Oh yeah, that's what we mean. Sounds great. Appreciate it.

Michael Byers-Norton - 01:06:39

Let's do it again soon. Man.

Tucker Adams - 01:06:40

All righty. We'll talk to you soon. Later.
